Senior Backend Engineer with 9+ years of experience building scalable Python backend systems, APIs, and distributed services with a focus on reliability, architecture, and CI/CD.

EXPERIENCE

Trialport

Senior Software Engineer

Atlanta, GA
July 2026 – Present

- Designed and implemented full-stack applications using Python/Django and Typescript/React.

Verifacto

Senior Python Engineer

Atlanta, GA
February 2026 – May 2026

- Designed backend services for AI chatbots with LangChain and AWS Bedrock, and Django to deliver insurance coverage updates to thousands of customers.

EvidentID

Senior Backend Software Engineer

Atlanta, GA
January 2021 – April 2025

- Modernized the Python stack to improve developer productivity by introducing FastAPI, async libraries, Poetry for dependency management, Docker-based testing, and standardized documentation practices.
- Developed Scala backend services and REST APIs for insurance document ingestion, implemented pipelines processing over 30,000 policies per month using Akka HTTP, Slick, PostgreSQL, and AWS S3.
- Designed a FastAPI Forward-Auth microservice for Emissary Ingress on Kubernetes, centralizing OAuth/JWT validation; worked with frontend and DevOps teams to standardize authentication across all web applications.
- Built a training framework for a fine-tuned BERT model, including data preparation and evaluation, to automate background check data classification; reduced manual review time from 3 hours to 5 minutes (98% improvement).
- Architected and deployed a production ML classification microservice on Azure Kubernetes using Python, RabbitMQ for async inference and S3 for model versioning, serving over 1,000 predictions/day.
- Collaborated with Product Managers to translate routine feature requests into repeatable workflows and used Python scripting to automate, cutting feature delivery time from weeks to 2–3 days.

Backend Software Engineer

December 2017 – January 2021

- Led a three person Agile team to build an automated background check service in Python on AWS EC2, processing 10,000+ verifications per month and generating over 40% of company revenue.
- Configured Jenkins workflows for CI/CD to run linting, unit and integration tests, builds using Docker and Helm, and pushing to PyPi and Docker repositories; enabled automated deployments for development environments.
- Built and maintained unit, integration, and end-to-end test suites using PyTest, Selenium, and Cucumber to improve platform reliability and regression coverage.
- Scaled Python microservices using an event-driven architecture with RabbitMQ, Celery, and Redis caching, improving platform throughput by 5x.

Junior Backend Software Engineer

November 2016 – December 2017

- Developed backend components for a secure data-sharing platform in Scala and MongoDB, focused on protecting sensitive PII and maintaining compliance with privacy and security standards.
- Worked within an Agile Scrum team, participating in sprint planning, estimation, code reviews, and retrospectives; led concise daily standups.

EDUCATION

Georgia Institute of Technology

Bachelor of Science in Computer Science, Focus in AI and Devices

Atlanta, GA
August 2013 – May 2016

SKILLS

Languages: Python, Scala, Elixir

Machine Learning: PyTorch, HuggingFace Transformers, BERT, NLP, LangChain, LLM APIs

DevOps: Kubernetes, Docker, AWS (S3, EC2, IAM), Azure, CI/CD (Jenkins), RabbitMQ

Backend Engineering: PostgreSQL, MongoDB, Redis, SQLAlchemy, REST APIs, FastAPI, Flask

Practices: Test Driven Development, Agile/Scrum, OOP and Functional Programming

Tools: Git, GitHub, Jira, Postman, Swagger, OpenAPI
