Senior Backend Software Engineer with extensive experience designing and building, services and APIs in cloud-native environments. Strong background in Python and Scala, and AI-powered services, with a proven ability to deliver reliable, well-tested software in fast-paced, collaborative Agile teams.

## EXPERIENCE

---

### EvidentID

Atlanta, GA

#### Backend Software Engineer II

January 2021 – April 2025

- Modernized the Python stack with FastAPI and async libraries, Poetry for dependency management, standardized Docker-based automated testing and documentation to accelerate developer productivity.
- Designed a FastAPI Forward-Auth microservice for Emissary Ingress on Kubernetes, centralizing OAuth JWT validation; collaborated with frontend and devops to ensure 100% of web-apps used this service.
- Built an AI-powered classification service using a fine-tuned BERT model to automate review of background check data, reducing manual review time from 3 hours to 5 minutes (98% efficiency gain).
- Led the development of a REST API in Python using Flask and SQLAlchemy to centralize notification and branding configuration for backend and frontend services; delivered in 2 weeks to meet a critical release deadline.
- Developed Scala backend services for insurance document ingestion and automation, processing >30K policies per month using Akka-HTTP, Slick, PostgreSQL and AWS S3.
- Collaborated with Product Managers to translate routine feature requests into repeatable workflows and used Python scripting to automate, cutting feature delivery time from weeks to 2–3 days.

#### Backend Software Engineer

December 2017 – January 2021

- Led a small Agile team to build an automated background check platform using Python deployed on AWS; became a core product for the company processing 10k+ verifications per month and generating over 40% of company revenue.
- Scaled backend microservices with an event-driven architecture using RabbitMQ, Celery for Python services, and Redis and in-memory caching achieving a 5x performance improvement in the background check platform.
- Maintained comprehensive end-to-end automated testing with PyTest, Selenium, and Cucumber/Gherkin for Behavior-Driven Development; enabled thorough regression testing for all services.
- Configured Jenkins workflows for CI/CD to run linting, unit and integration tests, builds using Docker and Helm, and pushing to PyPi and Docker repositories; enabled automated deployments for development environments.
- Diagnosed and resolved production issues through logs and metrics, participating in on-call rotations to ensure system reliability; used Prometheus, Grafana, Logz.io, and Sentry.

#### Junior Backend Software Engineer

November 2016 – December 2017

- Contributed to the core backend of a secure privacy-focused platform for sharing sensitive data implemented in Scala and using MongoDB.
- Worked within an Agile Scrum team, participating in sprint planning, estimation, code reviews, and retrospectives; known for quick meetings when leading standup.
- Developed data models and serialization for Evident's Python SDK and built the first data verification services from scratch; deployed on AWS EC2 with Ansible and Terraform.

## EDUCATION

---

### Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science, Focus in AI and Devices

August 2013 – May 2016

## SKILLS

---

**Languages:** Python, Scala, Elixir

**Frameworks:** FastAPI, Flask, Akka, Phoenix, PyTorch, HuggingFace, NumPy, nltk

**Data:** PostgreSQL, MongoDB, Redis, SQLAlchemy

**Cloud Platforms:** AWS (S3, EC2, IAM), Azure, Kubernetes

**Backend Engineering:** REST APIs, Distributed Systems, Event-Driven Architecture

**Practices:** Automated Testing, System Design, Agile/Scrum, OOP and Functional Programming

**Tools:** Git, GitHub, Jira, Postman, Swagger, OpenAPI
